

# Adding Keys to Custom Application Settings

[Return to Getting Started with the Workflow Building Block](#)

In order for the Workflow to function in your custom application, you will need to add the following access keys to settings. To do this, go to Administrations → Settings and click 'Add Key':

This will prompt you to fill in the key content:

**Add key**
✕

Scope:

Key:

Value:

Type:

Description:

Create the following five keys one by one, with the respective key content for each:

Key	Value	Type	Description
<yourapplicationname>.system.connection	localhost	string	Name of global connection to access the database.
<yourapplicationname>.system.database	CustomDatabase	string	Name of OLAP database containing the dimensions and cubes used by this building block or custom application.
<yourapplicationname>.system.integrator_project	Workflow	string	Default integrator project containing interfaces and batch procedures for this model.
<yourapplicationname>.system.integrator_server_url	http://localhost:7775	string	URL including port to access the SOAP API of integrator server.
<yourapplicationname>.configuration.logo	Files/Images/jedox_logo_45x45.png	string	Location of application logo in Report Designer.
