

Global Connections

Global connections that have been defined in the Administration→Connections area can be used in any Integrator project. To use a global connection, right-click on the Connections item in the Integrator navigation pane and select **New global connection** (see screenshot below).

Clicking this option opens a list of available global connections in the Integrator project (see screenshot below). Only the name and the description of this Integrator connection can be changed; all other settings are taken dynamically from Administration→Connections.

New global connection ×

Name	Type	Status
localhost	JedoxOlap	active
localhost_static	JedoxOlap	active
Palo remote	JedoxOlap	inactive
New Salesforce connection	Salesforce	active
PostgreSQL connection	Postgresql	active
New CosmosDB connection	Cosmosdb	active
New Apache Derby connection (2)	Derby	active
New Jedox OLAP connection	JedoxOlap	active

Note: Integrator variables that are defined on a project level can't be used to set properties in a global connection.
