

Designer Mode and User Mode

Two modes are available in a Jedox Spreadsheet: **Designer Mode** and **User Mode**.

Designer Mode is used to create an application. It allows you to create worksheets is created with formulas, formats, etc. You can select the cells available for data input in **User Mode** by going to **Design > Format Cells... > Protection > Lock Cells** and selecting **Locked** or **Unlocked***.

In **User Mode**, you can now work with the application created above. You may only enter data into cells that are unlocked. Other than this, you cannot make any changes to the application in User mode or switch to other sheets. Also, links to other worksheets are not executed. For tests of cells that leave the current sheet, the **Reports** module must be used.

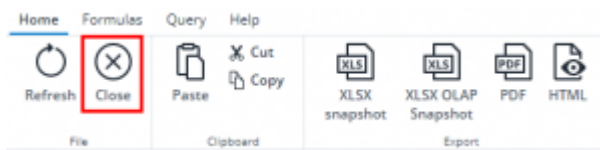

You can switch to user mode from **Design**:

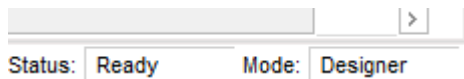

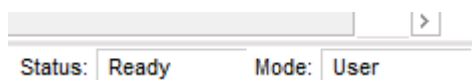

This option is also available in **Insert**:

You can go back to **Designer Mode** by clicking the Close button.

At the bottom right-hand side in the Jedox Spreadsheet worksheet, you will see the mode that you are currently in:

As long as a worksheet is open in **User Mode**, **Designer Mode** cannot be accessed.

*In this example, we use the default, Simple Ribbon toolbar.
