

# Generating Project Documentation

Any Jedox Integrator project can generate documentation that contains an alphabetical list of all components with type, descriptions, and references. A graphic flow chart of a user-specified list of jobs for this project can be included in the documentation. It is possible to navigate within the generated documentation to the referenced components.

Project documentation can be easily generated in Jedox Web with the Integrator component or through the [Command-Line Client](#).

## Generating documentation in Jedox Web with Integrator

1. Open Integrator and right-click on the name of the project to open a context menu. Click on **Download project documentation** and select the desired format (PDF or RTF).

2. The report will download to your default download folder.  
Below is a sample report.

## Jedox Integrator Project Documentation

### Project "sampleBiker"

**Description:**

ETL Demo Project.

Data is extracted from Flat Files and loaded to OLAP database Biker\_ETL which is similar to database Biker delivered with Setup. The sample demonstrates dimension and cube creation and some of the Transform possibilities.

Note: More samples can be uploaded from directory .\tomcat\webapps\etlserver\data\samples

ETL Server Version: 7.3

Last modified on: 05.11.2013 11:58

Documentation created on: 16.07.2018 10:44
