

# Formatting Cells in Excel Add-in

Jedox Excel Add-In comes with a number of preset styles for data display. Click **Edit View** to open the **Paste View** dialog, then click on the **Options** tab.

You can customize these preset styles. For example, you can control the display of decimal places of numbers or the background color of the view. Below is a description for changing decimal places in the Jedox style **White**. The other style sheets jedoxstyles\_\*.xls can be changed similarly.

**Note:** We recommend that you make a backup of the existing style template before making any changes.

1. Open the file

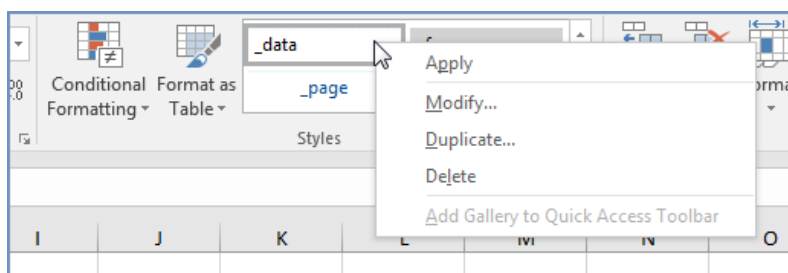

[file://<install\\_path>\xladdin\styles\view\jedoxstyles\\_White.xlsx](file://<install_path>\xladdin\styles\view\jedoxstyles_White.xlsx). The following worksheet is displayed:

Style	Sample	Comment (modulus 3)	Style	Sample	Style	Sample	Comment (modulus 3)
__page	Text	Style for [Edit View]					
__page	Text	Style for dimensions					
__page	Text	Style for connection_ row1	__col1	Text			Style for element level 1
__page	Text	Style for page element_ row2					Style for the empty cells between Elements on level 1
__data	1	Style for data cell_ row2	__col2	Text			Style for element level 2
__freeze	/	Style for locked cells_ row2	__col2	Text			Style for the empty cells between Elements on level 2
			__col3	Text			Style for element level 3
			__col3	Text			Style for the empty cells between Elements on level 3
			__row1	Text			Style for element level 1 with General style
			__row2	Text			Style for element level 2 with General style
			__col3	Text			Style for element level 3 with General style

- To change decimal places for data go to the **Styles** area of the **Excel Ribbon** and right-click the **\_data** style.
- Click **Modify...** in the context menu (see screenshot below):

- On the next dialog, click the **Format** button to open the **Format Cells** dialog.
- In the **Number** tab, change the number format to 2 decimal places.

6. Save the file [jedoxstyles\\_White.xlsx](#).

After saving, the changes are applied immediately for each new view with this style.

**Note:** the style **\_freeze** is the defined style for locked OLAP cells (i.e., cells that cannot be changed by users).
