

Setting Up Additional Conversion Types (Financial Consolidation)

[Return to the Financial Consolidation Model Overview](#)

By default, the [Conversion Type](#) dimension contains the elements [Average](#), [Month Start](#), [Month End](#) and [Historic](#). These elements must not be removed.

Additional elements can be added to this dimension as children of [All Conversion Types](#). The [Name](#) attribute must be set. Exchange rates for the additional conversion types can be stored in the [Daily Exchange Rates](#) and [Exchange Rates](#) cubes.
