

Start Page Configuration

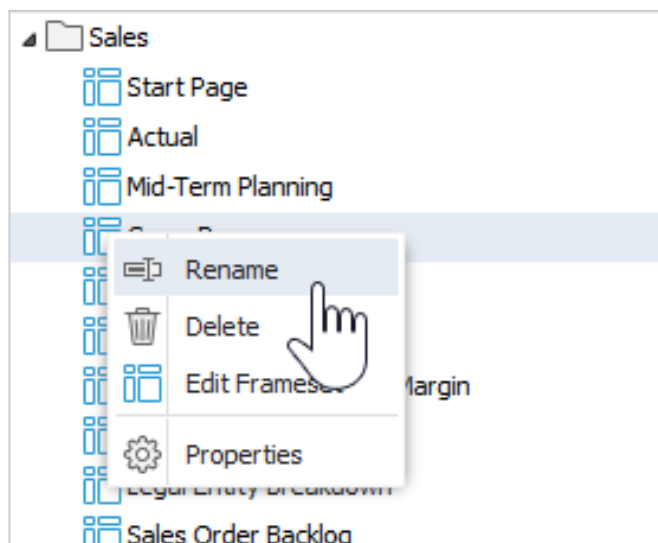

There are several ways to configure your model's start page report.

Configuration in the Reports Panel

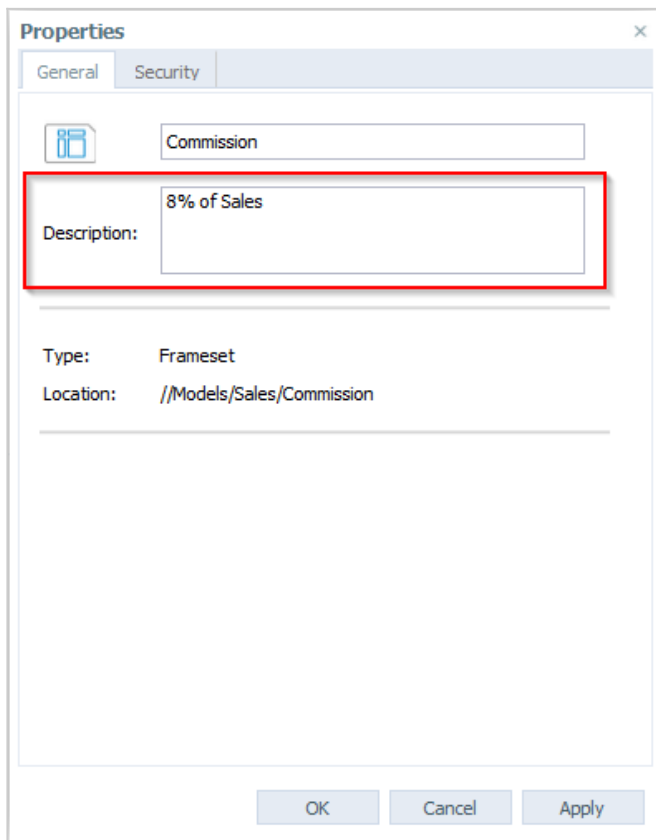

If you wish to reorganize, rename, or remove an item, go to the navigation bar. First, click the indicated icon to switch from user preview to design view in [Reports](#):

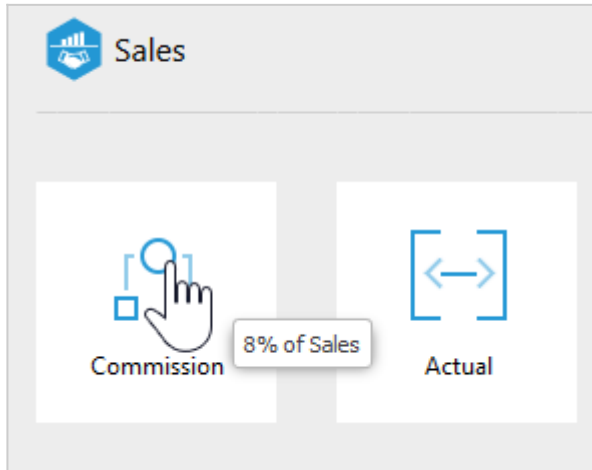

then right-click the report you wish to rename or delete:

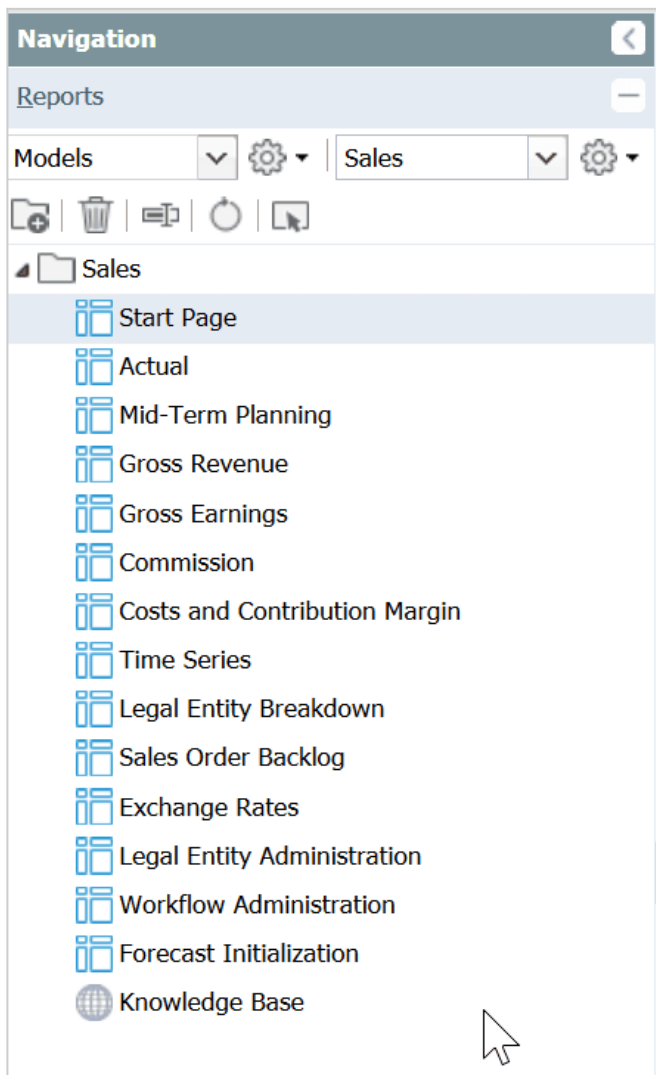

Under properties, you can customize your report description:

Switch back to design view to see the modified description in the tooltip (unmodified descriptions simply mirror their report title, e.g.. Commission).

To move reports, just drag, drop, and follow the prompt:

Configuration in the Administration Panel

We saw how to modify the report list in the report panel. To modify the content of the start page, go to the Administration panel.

First, go to: [Administration](#) → [Settings](#) → [model name] → [Configuration](#).

Key	Type	Value	Description
logo	string	Files/Images/jedox_logo.png	Location of application logo in Report Designer
sales_backlog	string	Backlog	Parent element for Backlog in Sales order Backlog Report
sales_backlog_on_invoiced	string	Backlog Non-Invoiced	Parent element for Backlog Non-Invoiced in Sales order Backlog Report
sales_signstandard	string	++++	Four characters (+ or -) denoting the sign of increases on Assets, Liabilities, Income and Expenses.
startpage_fqn_pattern	string	com\jedox\model\.*	Pattern matching the fully qualified name of one or more models to appear on the start page. The pattern is <code>com\jedox\model\.*</code> . This shows all Jedox models. You can modify the pattern to show fewer models. Add the fully qualified name of one or more models that you wish to display in the pattern. All models with a fully qualified name not matching the pattern will be omitted. Example: <code>com\jedox\model\balancesheet</code> would display only the <code>Balance Sheet</code> model.
startpage_no_columns	integer	5	Number of columns shown on the start page
startpage_skip_reports	integer	1	Number of reports skip
startpage_title	string	Jedox Models	Title of the start page

You can double-click any key to edit:

Key	Description
startpage_fqn_pattern	The pattern defines which models are shown on the start page report using regular expression syntax. The default pattern is <code>com\jedox\model\.*</code> . This shows all Jedox models. You can modify the pattern to show fewer models. Add the fully qualified name of one or more models that you wish to display in the pattern. All models with a fully qualified name not matching the pattern will be omitted. Example: <code>com\jedox\model\balancesheet</code> would display only the <code>Balance Sheet</code> model.
startpage_no_columns	This value defines the number of tile columns shown in the start page report. The default is 5.
startpage_skip_reports	This key allows you to skip reports. Skipped reports don't appear in the start page report. The default value is 1, which skips the first item in the report list. The first report in the default configuration of the Jedox models is the start page report itself, which is why it is omitted.
startpage_title	The start page title appears on the top of <code>Start Page</code> report. The default title is <code>Jedox Models</code> . You can replace it with any text you like.
