The Integrator Server can also read data from databases that aren't listed here, if a JDBC driver or an ODBC driver is available for the database. To connect to another version of a database for which a JDBC driver is shipped by Jedox, it is necessary to replace that JDBC driver's jar file with the required version's jar file.

For a list of supported SAP systems to which Jedox Integrator can connect, please see the article [SAP Systems Supported by Jedox SAP Connector](#).
