The input options are explained below:

Field	Description	Implementation
Task	Displays the name of the workflow task	Localized Name of the workflow task
Step	Displays the ID and name attribute of the workflow step	ID Name attribute of step dimension element.
Show Full History (checkbox)	When checked shows all of the status changes for the workflow step; when unchecked shows only the most recent status change.	
Activity log (table)	Table with the history of the status changes for the workflow step includes the activity, comment, modified and modified-by fields.	Shows the Activity , Comment , Modified and Modified By measures in the WF Status (Name of Step Dimension) cube for several activities of the workflow task. The access to these measures is encapsulated by the workflow_history() function in the workflow.php library.
Activity	Displays the name of the current workflow activity	
Due Date	Displays the due date of the current workflow step	Due Date attribute of WF Task Definition dimension. Date formats are supported for languages en , de , fr , es and ch .
Comment	Editable field to add a comment to the current workflow step	Comment measure in the WF Status (Name of Step Dimension) cube.
Send	The name of one of the transitions for a workflow activity (e.g. Send, Approve, or Reject).	Next activities of the current user activity of the current workflow step. The access to these elements is encapsulated by the workflow_next_activities() function in the workflow.php library.
Proceed (button)	Proceeds to Reject or Accept the workflow step	This operation is encapsulated by the workflow_proceed_activity() function in the workflow.php library.
Close (button)	Closes the Workflow Detail window
